PROFESSIONAL SUMMARY

AI/ML student with hands-on experience delivering impactful projects, including AI-powered concept mapping and blockchain simulators. Strong data analytics expertise combined with practical application of machine learning techniques. Excels in collaborative environments to drive data-driven solutions and enhance AI model performance.

EDUCATION

St. Martin's Engineering College	BTECH CSE(AI-ML) GPA:8.70	Sep 2023 - May 2027
----------------------------------	---------------------------	---------------------

TECHNICAL SKILLS

Languages: Python, SQL, JAVA
Libraries: Pandas, Numpy, Scikit-Learn, Matplotlib
Databases: MongoDB, PostgreSQL
Dev Tools: Visual Studio Code, Git

EXPERIENCE

AI Intern	EdiGlobe Pvt Ltd, Bangalore	Sep 2025 – Nov 2025
-----------	-----------------------------	---------------------

- Developed a machine learning system to detect depression from EEG signals using Python, improving automated mental health analysis through signal-based classification.
- Preprocessed EEG datasets by handling missing values, normalising data, and extracting 972 signal features, improving dataset quality and model training efficiency.
- Implemented and compared **SVM** Support Vector Machine and Convolutional Neural Network **CNN** models to classify EEG signals into Normal and Depressed.

PROJECTS

Project 1	AI-POWERED MINDMAPR: INTELLIGENT CONCEPT LINKING AND REVISION TOOL	Jan 2026 - March 2026
-----------	--	-----------------------

- Developed an AI-driven concept map generator to link related AI/ML concepts automatically. Used Tkinter, Sentence Transformers, and NetworkX to model and visualise semantic relationships.
- A fully interactive GUI enabling real-time exploration of AI/ML knowledge graphs.

Project 2	Blockchain Cryptocurrency Simulator	Nov 2025
-----------	-------------------------------------	----------

- Developed a blockchain-based cryptocurrency simulator using Python, implementing secure transaction storage and decentralised ledger concepts
- Implemented SHA-256 hashing and Proof-of-Work mining mechanism, ensuring secure block generation and maintaining blockchain integrity.
- Designed Block and Blockchain data structures to manage block creation, transaction records, and hash validation efficiently

Project 3	Social Media Impact on Teen Mental Health	May 2026
-----------	---	----------

- Developed an end-to-end machine learning pipeline to predict the impact of social media usage on adolescent mental health using structured behavioural and demographic.
- Performed exploratory data analysis and visualization to uncover relationships among social media usage, sleep, academic performance, and mental health indicators.

Project 3	IPL Analytics Dashboard	May 2026
-----------	-------------------------	----------

- Developed an interactive IPL Analytics Dashboard using Power BI by analysing IPL data from 2008-2025
- Performed end-to-end data preprocessing, cleaning, transformation, and exploratory data analysis (EDA) on multi-season IPL datasets using Pandas and NumPy.
- Designed an interactive dashboard using Streamlit with filters for seasons, teams, players, venues, and match statistics, enabling real-time data exploration.

CERTIFICATIONS

TCS iON: YUVA AI for ALL	Feb 2026
Ediglobe: Artificial Intelligence	Nov 2025
SCALER: SQL for Beginners: Learn SQL using MySQL and Database Design	June 2025
GOOGLE CLOUD: Introduction to Generative AI	April 2025
CISCO: Data Analytics Essentials (Certified)	March 2025
GEEKS FOR GEEKS: Generative AI and CHATGPT	Jan 2025
Deloitte: Data Analytics Job Simulation	Jan2025
